

PROTOTYPE/

The project's visual/interactive sandbox – approved here before any implementation tokens get spent.

Can be:

- **Static** – a mockup image or screen-by-screen wireframe
- **Interactive** – a UI shell with no real logic behind it (the notes-app shell built earlier is this: every button visibly tagged "not wired" instead of silently doing nothing)
- Both, ideally

Prototype code is never production code. It doesn't get upgraded into the real implementation – it gets replaced by it, once DESIGN.md and SPEC.md are signed off.
